Education

R V College of Engineering

BE in Information Science and Engineering

CGPA: 9.64

Aug 2023 – 2027

Bengaluru, Karnataka

Vagdevi Vilas School, Bengaluru

CBSE - 12 - PCMB

Percentage: 96.4

June 2021 – March 2023

Bengaluru, Karnataka

Relevant Coursework

- Data Structures
- Algorithms Analysis
- Operating Systems
- Database Management Systems
- AIML
- Computer Networks

Projects

EduMate KCET-Personalized Rank-to-College Advisor | *Node.js, Express.js, React, EC2, S3, Vercel* April 2026

- Developed KCET EduGuide, a full-stack counselling platform used by 70+ students, that helps students to prepare KCET counselling choice lists through personalized rank-based recommendations and automated choice management.
- Built frontend using React, TypeScript, Tailwind CSS, and with responsive UI, interactive cutoff visualizations with Recharts, PDF choice list generation, JWT-based authentication, and advanced filtering for colleges, branches, categories, locations, and counselling rounds.
- Developed a Node.js and Express backend with MongoDB, implementing recommendation algorithms, secure JWT authentication, mentor verification, meeting management, and RESTful APIs for real-time data access.
- Deployed the application using Amazon EC2 for the backend, Vercel for the frontend, and Amazon S3 for hosting images and branch insight JSON files.

Urban Sustainability AI | *Flask, LightGBM, GeoPandas, Rasterio, Leaflet, Google Gemini API* Jan 2026

- Developed an AI-powered urban sustainability web platform for Bangalore that integrates geospatial raster data and OpenStreetMap vectors to generate location-based sustainability scores with interactive map visualization.
- Implemented LightGBM models to predict environmental impact of proposed urban project, enabling before-after comparison and data-driven planning insights
- Integrated Google Gemini AI for explainable sustainability insights and explanation of impacts.

Web-Based Club Management System | *Node.js, Express.js, MySQL, MongoDB, NLP* Jan 2026

- Built a web-based club management system using MySQL + MongoDB, supporting role-based access, secure authentication, and concurrent users. .
- Implemented analytics dashboards for event performance, budget utilization, and participation trends using complex SQL joins and aggregations.
- Integrated NLP-based feedback analysis with insights and rating trends to support data-driven decision making.

Technical Skills

Languages: Python, C, C++, HTML/CSS, Matlab, JavaScript

Backend Technologies: Django, Express.js, Node.js

Frameworks: Linux, GitHub

Certificates

Cisco CCNA1: Introduction to Networks: Certification covering networking fundamentals, IP addressing, and device configuration using Cisco Packet Tracer.

Leadership / Extracurricular

Frequency

Member

Collaborated on project integrating software development with electronic control systems for real-world applications.

Jun 2023 – Present

RVCE

Accelerate

Member

Participated in events pertaining to brainstorming and projects on web development.

Jan 2023 – Present

RVCE

National Service Scheme
